

MUHAMMAD SOUMAN

Full-Stack Developer | AI & Machine Learning Developer

+92 332 5882447 • muhammadsouman7@gmail.com • Rawalpindi, Pakistan • <https://somy.vercel.app>

PROFESSIONAL SUMMARY

Results-driven Full-Stack Developer and AI Developer currently pursuing a Bachelor's in Artificial Intelligence (CGPA 3.64/4.00) at NUML, Islamabad. Hands-on experience designing and deploying scalable RESTful APIs, custom WordPress/WooCommerce platforms, and deep learning pipelines using PyTorch and transfer learning. Proficient in Python, PHP, and JavaScript with a proven track record of delivering end-to-end web applications integrating NLP, computer vision (YOLO, MobileNetV2), and third-party API services. Seeking a challenging role in AI-driven full-stack development to build intelligent, user-centric products.

EDUCATION

Bachelor of Science in Artificial Intelligence

Feb 2023 – Feb 2027 (Expected)

National University of Modern Languages (NUML), Islamabad, Pakistan | **CGPA: 3.64 / 4.00 (8th Semester)**

TECHNICAL SKILLS

Programming Languages: Python, JavaScript (ES6+), PHP

AI / Machine Learning: PyTorch, Artificial Neural Networks (ANN), Transfer Learning, Computer Vision (YOLO, Object Detection, Face Extraction), NLP Model Integration, MobileNetV2

Frontend Development: HTML5, CSS3, Bootstrap 5, JavaScript (DOM Manipulation), jQuery, Responsive & Mobile-First Design

Backend Development: Flask (REST APIs, Routing, Authentication), PHP (Custom WordPress Development), Session Management, RBAC

CMS & E-Commerce: WordPress (Custom Theme & Template Development), WooCommerce (Custom Extensions, Meta Fields, Dynamic Taxonomies)

Databases: MySQL, SQLite3

Tools & Technologies: Git, GitHub, REST APIs, Hugging Face API, OpenRouter AI API, yt-dlp, Formspree, Google reCAPTCHA, localStorage API

PROFESSIONAL EXPERIENCE

Full-Stack Developer Intern | Rhombix Technologies | Remote | Aug 2025 – Oct 2025

- Completed a structured remote internship delivering four progressive full-stack projects, demonstrating end-to-end development capability across authentication, REST API design, database management, and responsive UI.
- Built an enrollment Todo List application as an onboarding task, implementing CRUD operations, session handling, and a clean interactive frontend.
- Developed Loopify, a full-stack music player web application with real-time playback controls, live search, and a Flask-backed REST API serving dynamic content from SQLite.
- Engineered a Personal Book Library system with role-based access control (RBAC), admin inventory management, and a borrowing/return tracking workflow.
- Designed and delivered a production-ready Full-Stack Food Ordering System as the final capstone task, incorporating secure user authentication, dynamic REST APIs, an e-commerce order lifecycle, and a protected admin dashboard.

Junior Developer Mentor | EVS Professional Training Institute | Dec 2021 – Jul 2022

- Mentored junior front-end developers on HTML5, CSS3, JavaScript, and Bootstrap best practices, accelerating learning outcomes.

- Conducted structured code reviews, identifying layout and responsiveness defects and guiding trainees toward clean, maintainable codebases.
- Assisted trainees in portfolio and project development, ensuring adherence to industry-standard coding conventions.
- Fostered a collaborative learning environment that improved developer confidence and reduced onboarding time.

PROJECTS

AI / Machine Learning Projects

Noor AI-Qalb – Emotion-Based Quranic Verse Recommendation System

- Engineered a full-stack NLP web application that performs real-time emotion detection on user-input text using a Hugging Face Transformer model API, mapping predicted emotional states to contextually relevant Quranic verses.
- Designed and implemented a dynamic emotion-to-content mapping engine with English translation and integrated audio playback, delivering a personalized, accessible user experience.
- Built production-ready Flask backend services handling API routing, request/response lifecycle management, and real-time inference pipelines.
- Developed a fully responsive frontend (HTML5, CSS3, Bootstrap) optimized for cross-device compatibility and accessibility.
- Managed full software development lifecycle including version control via Git/GitHub and deployment workflows.

Tech Stack: *Python, Flask, Hugging Face Transformer API, NLP, HTML5, CSS3, JavaScript, Bootstrap*

GitHub Repository Link: <https://github.com/muhammadsouman7/noor-al-qalb>

Tom and Jerry Emotion Detection – CNN + ANN Hybrid Deep Learning Model

- Architected and trained a custom deep learning emotion classification system combining YOLO-based real-time face detection with a MobileNetV2 CNN/ANN hybrid model using transfer learning in PyTorch.
- Built an end-to-end data preprocessing and feature engineering pipeline: extracted video frames, applied YOLO for face cropping, and organized labeled facial datasets into emotion categories for model training.
- Achieved improved inference accuracy by applying transfer learning techniques on MobileNetV2, fine-tuning pre-trained weights on custom-labeled datasets.
- Deployed model within a Flask web application enabling real-time emotion inference via a minimal, responsive UI.

Tech Stack: *Python, PyTorch, YOLO (Object Detection), MobileNetV2, Transfer Learning, Computer Vision, Flask, HTML5, CSS3, JavaScript*

GitHub Repository Link: <https://github.com/muhammadsouman7/Cartoon-Face-And-Emotion-Detection>

Full-Stack Web Development Projects

Zumarah Tech – Industrial B2B Product Catalog & E-Commerce Platform

- Architected and delivered a fully custom WordPress + WooCommerce e-commerce platform for a real client, implementing a 4-level dynamic product taxonomy (Parent → Primary → Sub-Category → Products) with zero-code auto-propagation across all pages, menus, and navigation dropdowns.
- Developed custom PHP templates from scratch (single-product.php, taxonomy-product_cat.php, page-boards-modules.php), replacing all default WooCommerce templates with a fully branded, tabbed product detail experience (Features, Specifications, Ordering Info, Downloads, Related Products).
- Built a product comparison system featuring side-by-side specification tables, PDF/Excel export functionality, and an inquiry workflow with real-time navbar badge updates, hover preview dropdowns, and Formspre + reCAPTCHA form submission.
- Extended WooCommerce core with custom product meta fields (Datasheet PDF, Product Status, Ordering Information) and a 4-level cascading Product Quick Finder with AJAX-driven dynamic dropdowns.
- Implemented a dynamic mega menu powered by WooCommerce taxonomies, a responsive mobile sidebar with accordion navigation, and a site-wide product search engine with attribute and SKU indexing.

Tech Stack: PHP, WordPress, WooCommerce, JavaScript, localStorage API, Bootstrap 5, HTML5, CSS3, MySQL, Formspree, Google reCAPTCHA

Full-Stack Food Ordering System with Admin Dashboard

- Architected and delivered a production-ready full-stack food ordering platform built on Flask and SQLite, covering the complete e-commerce workflow: restaurant browsing, searchable menus, cart management, checkout, delivery details, and order item persistence.
- Implemented secure user registration and login using Werkzeug password hashing, with session-based authentication and protected route enforcement for both customers and admins.
- Designed and consumed dynamic REST API endpoints for real-time cart updates, menu filtering, and order lifecycle management (placed -> in-progress -> delivered).
- Built a dedicated, access-controlled Admin Dashboard enabling full CRUD operations on menu items and real-time order status tracking and updates.
- Applied responsive, mobile-first frontend design principles for a seamless cross-device ordering experience.

Tech Stack: Python, Flask, SQLite3, REST APIs, Werkzeug Security, Session Management, CRUD, HTML5, CSS3, JavaScript, Bootstrap

GitHub Repository Link: https://github.com/muhammadsouman7/RhombixTechnologies_Task04

Personal Book Library – RBAC-Based Library Management System

- Developed a full-stack CRUD web application with role-based access control (RBAC), implementing secure user authentication, session management, and distinct admin/user permission levels.
- Designed an admin dashboard for inventory management including book add, update, and delete operations with a borrowing and return tracking system.
- Built a responsive, mobile-first UI with seamless cross-device browsing and interaction; structured backend with Flask and SQLite3 for efficient relational data handling.

Tech Stack: Python, Flask, SQLite3, RBAC, Session Management, HTML5, CSS3, JavaScript, Bootstrap

GitHub Repository Link: https://github.com/muhammadsouman7/RhombixTechnologies_Task03

Loopify – Full-Stack Music Player Web Application

- Built a full-stack music streaming application with real-time playback controls, dynamic UI state management, and a live search feature for efficient content discovery.
- Developed RESTful Flask backend services managing data flow, file serving, and user interactions; designed a responsive, interactive frontend for smooth playback experience.

Tech Stack: Python, Flask, SQLite3, REST API, HTML5, CSS3, JavaScript, Bootstrap

GitHub Repository Link: https://github.com/muhammadsouman7/RhombixTechnologies_Task02

SoundCatch – YouTube Audio Downloader Web Application

- Developed a lightweight Flask web application integrating yt-dlp for server-side YouTube audio extraction, processing, and file delivery with a clean, ad-free user interface.
- Focused on performance, minimal latency in URL processing pipelines, and a responsive minimal frontend for ease of use.

Tech Stack: Python, Flask, yt-dlp, HTML5, CSS3, JavaScript, Bootstrap

GitHub Repository Link: <https://github.com/muhammadsouman7/SoundCatch>

Micro Chatbot – Full-Stack AI Chat Application

- Built a conversational AI web application integrating OpenRouter AI API for intelligent response generation, with complete user authentication (login, signup, password reset) backed by Flask and SQLite3.
- Designed and implemented a real-time responsive chat interface supporting dynamic message rendering and session-based conversation management.

Tech Stack: Python, Flask, OpenRouter AI API, SQLite3, HTML5, CSS3, JavaScript, Bootstrap

GitHub Repository Link: <https://github.com/muhammadsouman7/micro-chatbot>
